

Prolog: Asking Questions

Eivind Jahren

March 6, 2013

```
hello_world :- write('Hello World'), nl,  
              halt.
```

```
male(ola).  
male(olav).  
male(petter).  
  
female(kari).  
female(siri).  
  
parent(ola, olav).  
parent(ola, siri).  
parent(kari, olav).  
parent(kari, siri).  
sibling(ola, petter).  
sibling(petter, ola).
```

```
father(A, B) :-  
    parent(A, B),  
    male(A).  
  
mother(A, B) :-  
    parent(A, B),  
    female(A).  
  
sibling(A, B) :-  
    parent(C, A),  
    parent(C, B),  
    A \= B.  
  
brother(A, B) :-  
    male(A),  
    sibling(A, B).  
  
sister(A, B) :-  
    female(A),  
    sibling(A, B).
```

Example 1

```
?- uncle(petter,olav).  
true.
```

Example 1

```
?- uncle(petter,olav).  
true.
```

Example 2

```
?- uncle(X,olav).  
X=petter.
```

Example 1

```
?- uncle(petter,olav).  
true.
```

Example 2

```
?- uncle(X,olav).  
X=petter.
```

Example 2

```
?- uncle(X,Y).  
X = petter ,  
Y = olav ;  
X = petter ,  
Y = siri ;  
false.
```
